CHAPTER ONE - SAFETY

1.1 Introduction

1.2 Why learn about safety

1.3 Hazard

1.4 HSE

1.5 Near Misses

1.6 Elements of a successful HSE Management System

1.7 Causes of health and safety hazards while working

1.8 Protective measures while working on site

1.9 Safety measures while working at height (WAHs)

1.10 Scaffold Checklist

1.11 Safety measures during excavation

1.12 Safety measures while working in the power house

1.13 Activities, potential hazards and safety measures associated with each activity.

1.14 Safety Triangle

CHAPTER TWO - Energy losses

2.1 Introduction to energy losses

2.2 17 Different ways energy losses occur in a solar system

CHAPTER THREE - The Solar Cable

3.1 Introduction

3.2 Standard for sizing solar cable
3.3 Why your solar panel is not charging you solar battery effectively
3.4 Effect of wrong cable sizing
3.5 Wire and Cable
3.6 Types of wires according to international standard
3.7 Why use a particular conductor material during solar system installation?
3.8 What determine the choice of a particular wire/cable during system installation
3.9 Advantages and disadvantages of using Stranded wire/cable and Solid wire/cable during solar system installation
3.10 The right cable to use for solar system installation
3.11 Rules of solar cable connection
3.12 Solar Cable termination

CHAPTER 4 - Electricity

4.1 Introduction
4.2 Conductors
4.3 Electric Charge
4.4 Insulator
4.5 Voltage
4.6 Current
4.7 Resistance
4.8 Ohms Law
4.9 Resistivity

CHAPTER 5 VOLTAGE DROP IN CABLES

5.1 Introduction

5.2 Voltage drop

5.3 What causes voltage drop in a cable

5.4 Effects of voltage drop on electrical loads

5.5 How to prevent voltage drop

5.6 Permissible voltage drop

5.7 Permissible voltage drop for lighting loads

5.8 Permissible voltage drop for other loads

5.9 Implication of permissible voltage drops

5.10 Effect of length on resistance of cable and voltage drop

Chapter 6

6.1 Single-phase connection

6.2 Three-phase connection

6.3 Load current

6.4 Voltage drop in a single-phase AC Circuit

6.5 Voltage drop for other loads

6.6 Requirements for calculating voltage drop in a single-phase circuit.

6.7 Voltage drop for lighting loads

6.8 Cable sizing

6.9 Current rating table for different sizes of cable

6.10 Steps for sizing your cable size

6.11 Resistance and Reactance of cables

6.12 Voltage drop in a three-phase AC circuit

6.13 Voltage drop in dc circuits

6.14 Relationship between resistance, resistivity, length and area when determining voltage drop in a cable.

6.15 Voltage drop on solar panels,

Voltage drop from solar panel to charge controller or inverter

Voltage drop from charge controller to battery

Voltage drop from battery to inverter

Voltage drop from inverter to load

6.16 Equations for cable sizing for DC circuit and AC circuit

6.17 Conversion from mm^2 to American Wire Gauge
